DETAILED ACTION

1. Applicant's response filed on 03/21/2006 has been fully considered. Claims 1-20 are amended, claims 21 and 22 are canceled, and thus claims 1-20 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paulson (US 6,051,306), as evidenced by LeBlanc et al. (US 2006/0105134 A1), in view of Ishimaru et al. (US 6,610,389 B2).

4. Paulson discloses an ink jet receiving medium comprising a substrate and an ink receiving layer on the substrate (claim 8). The substrate comprises CD-ROM and CD recordable (col. 3, line 17), and the thickness must be within the range specified by ECMA and/or ISO, and the range includes 1.5mm, which is evidenced by LeBlanc (see paragraph [0087]). The recording medium further comprises a primer layer between the substrate and the ink receiving layer (col. 4, line 64). Paulson does not teach ink receiving layer containing the claimed components.

5. Ishimaru teaches an ink jet recording medium comprising a support and an ink receptive layer on the support, wherein the ink receptive layer comprises fumed silica having a primary particle size of 3-30 nm (claims 1 and 2).

Art Unit: 1774

6. Paulson and Ishimaru are analogous art because they from the same field of endeavor that is the ink jet recording medium art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the ink receptive layer of the Ishimaru with the invention of Paulson so as to provide a recording surface having enhance ink absorbing property and print quality.

7. With respect to claims 1-4 and 13-16, it would have been an obvious matter of design choice to vary the coating size or area of the ink receptive layer and/or the primer layer, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art.

8. Paulson does not teach that its substrate such as CD-ROM and CD recordable has a protective layer. However, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to protect the surface of the CD-ROM and CD recordable with a protective layer so as to reduce damages that may be caused while printing and handling.

Response to Arguments

9. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

11. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
